Deepesh Sharma

Product & Data Analytics Associate

9029223363 · deepeshsharma5669@gmail.com · Badlapur East, Maharashtra · GitHub

SUMMARY

Data Analyst with hands-on experience building production analytics dashboards, automated data pipelines, and CRM/PMT tools using SQL, Python, and Supabase/Postgres. Skilled at translating ambiguous business requirements into validated metrics and shipped products, having independently directed AI-assisted development of internal tools now used daily by Sales and Product teams. Strong background in UAT/QA, data integrity, and workflow automation.

TECHNICAL SKILLS

- **Product & Data Analysis:** Requirements definition, data modeling, business logic design, QA/UAT, SQL query logic & validation
- **AI-Directed Development:** Directed end-to-end builds using AI coding tools across Supabase, Next.js, TypeScript, Google Apps Script, and Postgres – covering architecture, schema design, debugging, and QA (did not personally write code)
- **Tools & Platforms:** Supabase (dashboard & configuration), Retool, Streamlit, Figma, Git (version control operations), Power BI, Excel (Pivot Tables, VLOOKUP, XLOOKUP)

WORK EXPERIENCE

Finace Infosolution LLP (TheFinPedia) **Mumbai, India**

Product & Operations Associate *August 2024 · Present*

- Conduct UAT and production testing to validate website functionality, UI consistency, and user experience.
- Manage website content, events, and updates through CMS while ensuring data accuracy and timely execution.
- Designed and managed database schemas in Supabase to support reporting and business analytics requirements.
- Developed SQL queries to extract, analyze, and present business insights for management decision-making.
- Built an automated Google Sheets-to-Supabase integration using Google Apps Script, eliminating repetitive manual database updates.
- Researched and implemented dashboard solutions using Retool and Streamlit, developing dashboards that display key operational metrics.
- Created and documented event tracking plans, naming conventions, and event properties following analytics best practices.
- Coordinate with product, design, and development teams to support feature releases and operational improvements.

KEY PROJECTS

TheFinPedia Executive Analytics Dashboard *Streamlit, Supabase, SQL, Python, Plotly, Render, Claude*

AI-assisted development

- Built a full-scale analytics dashboard tracking 100+ business metrics across Revenue, Subscriptions, Product Usage, Support, and Engineering for a B2B fintech company.
- Built a transaction-level classification system for plan upgrades, downgrades, and renewals, and quantified revenue lost specifically to downgrades.
- Corrected a renewal-rate calculation that miscounted all paying customers as renewals and fixed a mislabeled engagement metric that was dividing by the wrong denominator.
- Created a unified customer 360° view consolidating plan history, payments, support tickets, and activity, reducing cross-tool lookups for Support and Sales.
- Implemented secure authentication and role-based access control across Product, Support, and Admin teams.

Automated Data Pipeline: Google Sheets → Supabase *Google Apps Script, Supabase, Claude*

AI-assisted development

- Designed and shipped a two-stage pipeline syncing 7 business-critical tables (40,000+ records) from spreadsheets into a production Postgres backend, powering a live executive dashboard.
- Built configurable upsert/append sync logic with primary-key conflict resolution and timezone-safe date normalization, ensuring zero data loss across dozens of production runs.
- Diagnosed and resolved data integrity issues (duplicate keys, foreign-key violations) via defensive validation built into the schema and sync logic.

TheFinPedia Sales CRM *Streamlit, Supabase, Claude*
AI-assisted development

- Directed end-to-end design and development of a CRM tool replacing manual Excel-based outreach tracking, now used daily by the sales team.
- Designed customer segmentation logic (never engaged, gone quiet, returned after contact) and a fair attribution system for shared customer follow-ups.
- Shipped a templated email campaign feature enabling personalized outreach at the customer-group level, plus automated deployment and safety checks to prevent data loss.

PMT – Project Management Tool *Next.js, TypeScript, Supabase, Claude, Emergent*
Fully Built Using AI

- Owned a multi-role (Admin/Manager/Member/Client) PM tool from an open-ended business request through to a working application, independently driving requirements, architecture, and delivery.
- Analyzed 2,600+ historical operational records, surfacing an on-time-delivery issue (up to 84% delivered late) that shaped the core data model and feature priorities.
- Reverse-engineered an undocumented multi-stage approval workflow through stakeholder interviews and translated it into a formal system design.
- Designed the relational database schema and personally managed technical infrastructure (Supabase, auth, secrets, Git) across dozens of build/QA cycles.

EDUCATION

Bachelor of Engineering – Information Technology **Maharashtra, India**
Graduated January 2025

CORE STRENGTHS

Analytical Thinking · Fast Learner · Problem Solving · Process Improvement · Attention to Detail · Ownership & Accountability
